# **NAME**

rrdlastupdate - Return the most recent update to an RRD

# **SYNOPSIS**

rrdtool lastupdate filename [--daemon|-d address]

# DESCRIPTION

The **lastupdate** function returns the UNIX timestamp and the value stored for each datum in the most recent update of an RRD.

filename The name of the RRD that contains the data.

### --daemon|-d address

Address of the rrdcached daemon. If specified, a flush command is sent to the server before reading the RRD files. This allows **rrdtool** to return fresh data even if the daemon is configured to cache values for a long time. For a list of accepted formats, see the **-l** option in the rrdcached manual.

rrdtool lastupdate --daemon unix:/var/run/rrdcached.sock /var/lib/rrd/foo

# **ENVIRONMENT VARIABLES**

The following environment variables may be used to change the behavior of rrdtool lastupdate:

# RRDCACHED\_ADDRESS

If this environment variable is set it will have the same effect as specifying the --daemon option on the command line. If both are present, the command line argument takes precedence.
